## ENVIRONMENT

"Rokada" tries to limit the impact on the environment.

### ***To the effect we follow a number of rules:***

- Minimize atmospheric gas emission. Modern "Rokada" vehicles helps to make low carbon dioxide emissions. We do this no matter of motivation programs or relevant legislation.
- Active exchange pallets. Our exchange pallets-making intelligence, which works provided by IT credit system also makes low carbon dioxide emission. Returnable packing which can be used for 3-5 times.
- Use of electronic forklifts. We use electronic forklifts to reduce carbon emissions.
- Reuse instead of disposal. Refusal or utilization of packing materials is most of our ecological initiative. For this reason sub divisions used reusable transport packaging. In addition, we instruct utilization of unserviceable IT-equipment for certificated and specialised companies.

### **The most important thing is that "Rokada" guarantees safety and security!**

Our warehouses for storage of dangerous goods meet all environmental requirements and the highest safety standards. To minimize the danger to human race and nature we prefer handling of dangerous goods and substances that may create a risk, in case of water contact, within warehouses. During each transportation we provide the best quality of loading and fixing of cargo and monitoring for safety on the road. However, such comprehensive inspection applied to all transportation.
